

Our client, a full service engineering firm with offices in Dallas and Houston, TX is looking for engineers with some combination of HVAC, commissioning and facilities management experience. **MUST BE A PE OR ON THE PE TRACK!** This individual will be involved in the production and execution side of projects. Must have the ability to go into the field take tests and write up the procedures, understand the MEP systems to execute that test including basic knowledge of commissioning. This client does what they call performance based commissioning in an effort to make sure the systems are fundamentally working the way they are supposed to. This individual will manage a particular task or phase of a project and grow into a Project Management role. In addition, this person will be responsible for design reviews, writing test procedures and execution of the tests and field operations. Projects located in Houston, Dallas, Austin and San Antonio. They have a lot of big projects in the higher education and healthcare areas including hospitals, central utility plants, labs and universities among them. Interested in seeing resumes of candidates from the consulting or facilities management arenas or a combination of the two. Will relocate.

Kindest regards, Donna Mortimer
